

AI USAGE DISCLOSURE FORM

OpenClaw Hackathon Submission

1. TEAM & PROJECT DETAILS

Team Name	CloseClaw
Project Name	Onboarding Archeologist – AI-Powered Repository Intelligence
Organization	R.V. College of Engineering (RVCE), Bengaluru
Team Members	● Samarth S ● Sanjeev N
Submission Date	May 8th 2026

2. AI USAGE DECLARATION

Did your team use Artificial Intelligence in developing this project?

✓ YES

AI is integral to the project architecture. The system uses Ollama Qwen API for repository analysis, architecture understanding, and conversational responses.

3. PRIMARY PURPOSES OF AI USAGE

- **Code Comprehension:** AI analyzes repository structure, dependencies, and code patterns
- **Conversational Assistance:** Natural language Q&A about project architecture and workflows
- **Onboarding Automation:** Generates contextual setup guidance and documentation
- **Development Assistance:** Code generation, debugging hints, and architectural suggestions
- **System Prompts & Prompting:** Crafted advanced prompts for multi-agent reasoning

4. DETAILED FEATURE BREAKDOWN & AI CONTRIBUTION

Feature 1: Repository Analysis Engine

Origin	AI-Generated (Claude API)
AI Tools Used	OpenClaw, Ollama, Qwen 2.5, FastAPI, python-telegram-bot, GitHub API, Docker, and Uvicorn.
Prompt Category	Few-shot learning: folder structure patterns → architectural understanding
Output Summary	Structured JSON with project architecture, dependency graph, and module relationships
Team Modification	Integration layer in FastAPI (handlers.py) with validation & filtering; OpenClaw skill.yaml configuration

Feature 2: 7-Agent Autonomous System

Origin	Both Self-Generated & AI-Assisted
Agents	● Perception Agent: Analyzes repo files & structure ● Decisions Agent: Suggests architectural improvements ● Ownership Agent: Identifies code ownership & responsibilities ● Ghost-Code Agent: Detects unused/dead code ● Bus-Factor Agent: Assesses knowledge concentration risk ● Scar-Tissue Agent: Identifies problematic legacy patterns ● Onboarding Agent: Generates personalized guidance
AI Usage	Autonomous multi-agent AI system using OpenClaw , Ollama , and Qwen 2.5 for explainable repository analysis and onboarding intelligence.
Modification	Implemented agent coordination logic; custom tool mappings via OpenClaw

Feature 3: Telegram Bot Interface & Conversational Layer

Origin	Self-Generated (Team Implementation)
AI in this Feature	Backend uses Claude API for natural language understanding; Telegram bot middleware by team
Tech Stack	Node.js Telegram bot framework; FastAPI backend; WebSocket for real-time
Modification	Team built all bot logic, handlers, and command dispatch system; Claude provides NLU

Feature 4: System Prompts & Prompt Engineering

Origin	Self-Generated (Team Crafted)
Prompts Created	6 core system prompts in system_prompt.md; instruction-based Few-Shot patterns for repo analysis
Purpose	Control Claude API behavior for consistent repository understanding & reasoning
Techniques	● Chain-of-Thought for architecture reasoning ● JSON schema specification for structured outputs ● Role-playing (expert architect perspective) ● Constraint-based prompting for edge cases

Feature 5: OpenClaw Integration & Skill Definition

Origin	Self-Generated (Team Architecture)
AI Integration	OpenClaw framework enables Claude API calls for repository tools; skill.yaml defines 6 tools
Tools	● analyze_repo – Full repository structure analysis ● get_module_info – Deep dive into specific modules ● explain_architecture – High-level architecture walkthrough ● setup_guide – Contextual onboarding steps ● dependency_analysis – Dependency graph & version info ● workflow_explain – CI/CD & build workflow guidance
Implementation	Full team-built handlers.py with command dispatch; openclaw.config.yaml for Telegram polling

5. ETHICAL & COMPLIANCE CONFIRMATION

✓ AI usage complies with hackathon guidelines and policies	CONFIRMED
✓ No proprietary or copyrighted data misused	I AGREE
✓ All code & prompts are original team work or properly attributed	CONFIRMED
✓ Repository code is original; no unauthorized usage of third-party models	CONFIRMED

6. ADDITIONAL DISCLOSURE NOTES

The system is built as an autonomous multi-agent AI platform for repository intelligence and developer onboarding. It uses OpenClaw for orchestration, Ollama with Qwen 2.5 for local AI reasoning, and a FastAPI backend for execution and analysis services. The platform provides explainable insights through decision traces, confidence scoring, and specialized agents.

The project is intended for educational, research, and developer productivity purposes. All AI-generated findings are designed to support human decision-making rather than replace it, and critical recommendations are expected to be reviewed manually before action. Transparency

The system explicitly discloses AI-assisted analysis to users. Responses indicate when Claude has processed repository data. Users can access raw repository data independently to verify AI outputs.

Local-First Architecture

Core processing (7-agent system, file scanning) occurs locally. Claude is called for contextual reasoning only. This design preserves privacy and reduces latency—aligning with the On-Device hackathon theme.

7. DECLARATION & SIGN-OFF

We hereby declare that the information provided in this AI Usage Disclosure Form is accurate and complete. Our team has used AI tools ethically and in compliance with all applicable guidelines.

Name (Team Lead)	Signature
Sanjeev N	Sanjeev N
Role	Date
Lead Architect & Backend Developer	May 8th 2026
